Attention:
Please take care, that you will straight all SCHRAUBENTELLERFEDER®, before use!

Straightening Instruction:
Insert spring in a rectangular prism (90° angle) which is at least as long as the SCHRAUBENTELLERFEDER®. The width of guiding 90° prism area has to be at least 75% of the spring diameter. Then using impact hammer according to drawing, adjust spring-halves by little impacts over the entire length, turn the spring by 90° inbetween the impacts. The adjustment was successful when guiding rod can be inserted easily by hand.
